BRIEF SUMMARY

COVID-19 Vaccine Hesitancy: An international survey of views from health and social care workers

What we are doing?
Our research team have created a short online survey to understand the international impact of COVID-19 vaccine hesitancy.

Why we are doing it?
To help control the COVID-19 pandemic several vaccines have been authorised, with mass vaccination programmes aiming to slow transmission of the virus as well as reducing hospitalisation and death from COVID-19. The timeline for vaccine distribution is estimated to be between late 2020 and 2022, where health and social care workers have been regarded as a priority group for receiving vaccination. Yet, even with the availability of the vaccine, current research shows that the uptake of vaccines is not certain due to vaccine hesitancy. Therefore, our international survey aims to find which factors and reasons are impacting vaccine hesitancy.

What the benefits will be?
The benefit of this survey is to help understand the main reasons for vaccine hesitancy.

Research host:
Leicester Diabetes Centre, University of Leicester in the United Kingdom.

Who we are working with:
1. Leicester Diabetes Centre
2. University of Leicester
3. National Institute for Health Research (NIHR) Applied Research Collaboration (ARC) East Midlands
4. Leicester Real World Evidence (LRWE)
5. National Institute for Health Research Leicester (NIHR) Biomedical Research Centre and Clinical Research Facility (BRC and CRF)
6. Centre for Black and Minority Ethnic (BME) Health
7. National Institute for Health Research (NIHR)
8. Leicester's Research
9. Leicester Hospitals
10. South Asian Health Foundation

Who is the target audience and how can you take part?
The survey is to be filled out by health care and social care workers.

Participation is through the following link which will open in a new window. Click here

If you have any questions, please email me Yogini Chudasama, yc244@leicester.ac.uk

Thank you very much.
