

# Be the voice of patients with dark skin tones for shaping research on recognising skin damage across skin tones.

- **Do you or your family member have a long-term wound? (such as a pressure ulcer, leg ulcer or moisture lesion)**
- **Does the person with a wound have a dark skin tone? (black or brown skin)**

We are really keen to hear the voices of people who have dark skin tones as we know the initial signs of skin damage caused by pressure, infection and circulation differ across skin tones. There are concerns this negatively impacts people with dark skin tones.

We would like to hear your experiences of your care and enable you to actively contribute to the planning, designing and shaping of a research project on training skin assessment to non-specialist health and social care staff.

- **Share what matters to you**
- **Make a difference to what is included in our educational package and how our research is conducted.**

**We are giving away £25 electronic shopping voucher as a thank-you for your contribution.**

**Interested in taking part?** Click on link: <https://forms.office.com/e/9aLNSv9GCP> or email: [victoria.clemett@kcl.ac.uk](mailto:victoria.clemett@kcl.ac.uk)
