

Help Shape Research into Hard-to-Treat High Blood Pressure

Join our Patient and Public Involvement (PPI) Group

Why this matters

Some people still have high blood pressure even while taking medicines - and it can lead to serious health problems, like heart attack, stroke, and kidney disease.

We want to change that.

How you can help

We're looking for people with lived experience of:

- Hypertension
- Or Resistant or difficult-to-treat high blood pressure.
- Or caring for someone

What this research is about

Find out how common resistant hypertension is

Understand whether it has unique biological causes

Identify existing medicines that could be repurposed to treat it

Why join?

- Influence national research and NHS practice
- Make sure patient voices are heard in treatment decisions
- Help improve care for others with hard-to-treat high blood pressure

Interested?
