The Clinical Trial Engagement APP Study

Ethics Reference: MS IDREC 1863225

Volunteers needed for a study about injury

What is the study about?

The Kadoorie Oxford Trauma and Emergency care research team are developing a mobile app. The App will be for people aged 16-30 years old who are taking part in a clinical trial after orthopaedic trauma. Orthopaedic trauma includes a range of injuries such as broken bones, a dislocated shoulder or a dislocated kneecap. To help us to develop the app, we would like to speak to young people who have experienced orthopaedic trauma to understand their experience and hear their views.

Who can take part?

People, aged 16-30 years who have experienced orthopaedic trauma.

What would it involve?

You will take part in an interview or focus group about your experience. Interviews will last up to 60 minutes of your time and can be by telephone, online or in a location convenient for you. Focus groups would last up to two hours and will be online or in a location convenient for the group.

If you are interested?

Please contact Emma Phelps at the Oxford Trauma & Emergency Care research group if you would like more information: emma.phelps@ndorms.ox.ac.uk. There is no obligation to take part. You will receive a gift voucher to compensate for your time.

Thank you!
