

Have your say in the Future of Prostate Care

Are you a:

- ▶ Man between 45-75 years old who has experienced bladder and urological symptoms (i.e. urgency, frequency, waking at night)
- ▶ Partner, Carer or Family member of someone who has experienced bladder symptoms
- ▶ Healthcare professional who has experience in urological care

We need YOUR help evaluating a decision aid designed with patients and loved ones, for men with a urological condition called Benign Prostatic Hyperplasia (BPH).

This tool aims to offer information and support when making healthcare decisions about treatment for BPH.

Our evaluation study involves taking part in either:

An Online Questionnaire

or

An Interview

You can anonymously give your feedback using the questionnaire, or take part in an interview focused on your thoughts and experiences of using the decision aid.

Interested in having your say? Scan the QR codes above to find out more.
